

Netflix Data Analysis

Business Report & Content Strategy Recommendations

This report summarizes an end-to-end analysis of an 8,807-title Netflix-style content catalog, covering data cleaning, exploratory analysis, and business insight generation. Every figure below is computed directly from the project's dataset and is fully reproducible via the accompanying Python scripts and Jupyter notebooks.

Headline KPIs

Metric	Value
Total titles analyzed	8,807
Movies / TV Shows	6,178 / 2,629
Movie / TV Show split	70.1% / 29.9%
International content share	61.8%
Mature-rated content share (TV-MA/R/NC-17)	42.4%
Director metadata coverage	61.0%
Single-season show share	73.0%
Median movie runtime	98.0 min

Top Content-Producing Countries

Country	Titles
United States	3,035
India	1,155
United Kingdom	969
Canada	626
Japan	569
South Korea	556
France	537
Germany	449

Key Findings

- Movies make up 70.1% of the catalog versus 29.9% TV shows, indicating a movie-led breadth strategy with TV originals as a smaller but likely higher-retention investment.
- 61.8% of the catalog is international (non-US) content, supporting a genuinely global content-library positioning.
- Content additions grew from single digits in 2008 to a peak near 1,750 titles in 2020 before cooling in 2021 -- a maturing acquisition strategy, not a stalling one.
- December, January, and July are the heaviest content-addition months, aligning releases with higher-attention seasonal windows.
- 73% of TV shows never renew past a single season, making single-season performance the primary signal available for renewal decisions.
- 39% of titles have no credited director, concentrated in TV shows -- the clearest immediate metadata-quality gap to close.
- A structural data-quality defect (duration values leaking into the rating field) was identified and corrected during cleaning.

Recommendations

- Prioritize continued investment in the top 3-5 producing countries, where content volume and presumed audience fit are already proven.
- Audit single-season shows for renewal candidates and formalize what engagement threshold would justify a season 2 order.
- Schedule flagship original premieres around the December/January and July seasonality windows already visible in the addition data.
- Run a metadata-completion initiative targeting TV-show director and cast credits to improve personalization and search relevance.
- Balance the 42.4% mature-content share with continued family-content investment to support household-plan subscriber growth.
